

FEATURE OF SISOHIS

- ✓ Easy access to doctors' data to generate varied records, including classification based on the demographic, gender, age, etc. It is especially beneficial at ambulatory (out-patient) point, hence enhancing continuity of care. As well as, Internet-based access improves the ability to remotely access such data.
- ✓ Web/Cloud Based, Three Layered.
- ✓ Access patient data and any results anywhere, anytime.
- ✓ Always 1 Patient, 1 Record.
- ✓ Smart Search and Drag & Drop.
- ✓ It helps as a decision support system for the hospital authorities for developing comprehensive healthcare policies.
- ✓ Efficient and accurate administration of finance, diet of patient, engineering, and distribution of medical aid. It helps to view a broad picture of hospital growth.
- ✓ Improved monitoring of drug usage, and study of effectiveness. This leads to the reduction of adverse drug interactions while promoting more appropriate pharmaceutical utilization.
- ✓ Enhances information integrity, reduces transcription errors, and reduces duplication of information entries.
- ✓ Hospital software is easy to use and eliminates error caused by handwriting. New technology computer systems give perfect performance to pull up information from server or cloud servers.
